
how can i play AC in your servers?

Posted by MARUI/PT - 2016/10/09 21:17

I people

i have a problem i am try to enter in your server mx5cup
when i do the log in AC to enter e goes out and became in little screen
and i do a donate for you gays and dont send me any message dont do anything????
Anyone to help me
sorry for my bad inglish...

Aw: how can i play AC in your servers?

Posted by Haggard - 2016/10/10 08:23

Okay, so first of all: Welcome! :)

1. Driving on the public servers should not be a problem, since they do not use modded content and don't require a password. Maybe the server was full and you couldn't join because of that? Keep an eye on error messages in the bottom of the screen when you try to enter, sometimes they tell you about the problem. Sometimes the resolution changes in the game options, whenever I can't join, that's the first thing I check.

2. Donating is always very welcome, though not required to drive on the servers. After donating your download speed in the Autoupdater should drastically increase, even if nobody messaged you.

3. The Autoupdater: If you don't have it yet, download it from Downloads section in the top left. With it you download and install all new mods automatically, which you need for most event races and the servers 1-3.

I hope I could help, keep asking if you still have difficulties :)

Cheers,
Haggard

@Haggard Thx

On the public servers are also some mod-tracks in the track-rotation. Car mods are poison. :X

You get dropped out of the server because your Grade is below A or B. That is the reason why I joined here to find out how far I am from that rating. I am currently C.
Still don't know what my rating is.

type /MR in the chat on a MR server to see your current rating

Is there a more descriptive way to tell your grade though other than the letter grade ?
I wanna see how far I am from B.

imho no, but you only need some clear rounds behind a other car to get from C to B (~5-7).
but into a near distance (~10-15meters behind).
then it should not take a long time to get A/B.
but no crashing in this rounds ;)

Sounds nearly impossible on public servers :) Thank you though

Hi
New here as well. I would like to join the Mazda mx5 league starting wednesday but when I enter the practise server I immediately get a connection issue. I am grade A or B it says in an other mrserver. How do I join this league?
Where do I have to register?
Or is there another problem why I get the connection issue?
Grtz

Tim

Hi again,

Tried again and I no longer got the connection issue and was able to stay in the server. Still one question remains though: how do I enlist for this league?

grtz

this is no league at all, its a racing community

for the mx5 event, you need just to login on this page a few minutes before event start, then you see the event password on the right side above the serverlists

for 12h and 24h events you must make the team entries, described at the event infos that belongs to this events in the forum

keep you install clean and only use the updater found in the download section, to avoid mismatching, and of course you need the dlc packs for some events

thnx for replying gridkeeper!

so the link below:

<http://www.schwarzbierbude.de/images/stories/events/2016/20161019.png>

it's not a racing series?

how does that actually work then?

is it a series of standalone events on a fixed calendar?

grtz

grtz

yes it is a racing series,you give the answer your self.its a series of "single" events,see your link with calander dates

it is work with race results (shown on the left side on this page,called " events 2016 ")

you only need to join and race,after the race you find your results and rankings from all drivers who joined the races(single server results and whole series result)

thats all

if you want to drive at the 12h or 24h events,you have to join a team ,this team events are only the 12h and 24h events until now.

the mx5 cup is a series of regular single events,with the rankings and results sayed.password for the event you find on the right side before event start

Been making things more complicated than they actually are...
Thnx again gridkeeper.
Grtz
