Issue with liveries of cars

_____

Hi all,

I downloaded the content of cars and track via autoupdater. Absolutely great stuff!

After that I tried to configure a custom championship and mentioned that some of the KI-cars do not use the original livery the have/had in real life. Especially this affected to the Toyota TS040 and Porsche 919 (think it was the 2015 model, perhaps the 2016 one).

Before I started the championship I set both back to their original clothes cause in the menu where you determine the cars mod-liveries were shown.

Is there any way get the cars in the game in that mode in original car paint?

Thanks!
